

Monday March 1st, maths

Number Bonds to 10

This week we will be learning about our number bonds to 10. These are the numbers, that when combined together, make 10. For example, 1 add 9 is 10 and 5 add 5 is 10.

- *You will need your tens frames from last time, but you can always draw another one – like this.
- *Next, find some loose items with two distinct parts such as shells/stones/pebbles.
- *Then fill your tens frame with some of your items (for example, 6 cubes). ‘
- *Ask the question ‘How many stones do I need to make 10?’
- *Go over the number bond verbally – 6 stones and 4 stones make 10.
- *6 and 4 makes 10
- *If you want a challenge, you can record your number bond.

Extra challenge – Can you work out how many number bonds there are altogether?

❖ Making 10 song [click here](#)

Fun time Monday maths.

Work in a pair and make bunny ears to total 10. You might hold up 8 fingers so your child holds up 2.
